

FY2014 Reorganizations

As approved at the Regular Meeting of the Board of Directors held on January 17, 2014, Mitsubishi Corporation will implement the following reorganizations, effective April 1, 2014.

Business Division Reorganizations (See attachment for details)

1. Metals Group

In an effort to achieve the targets set out in New Strategic Direction of doubling attributable equity production in coking coal and copper by the year 2020, the Mineral Resources Investment Division A and the Mineral Resources Investment Division B will be combined to form a single Mineral Resources Investment Division. The change will serve to strengthen our business activities in the metals resources field by integrating the management of all our metals resource investments.

2. Living Essentials Group

To date, operations in the Living Essentials Group's diverse business and product domains (including foods, healthcare, textiles, and general merchandise) have been organized on a product-by-product basis. However, under this new four-division structure, the Group will enhance its functions along the supply chains by proactively allocating management resources to global consumer business development, retail business sub-segments, procurement of raw materials, and to product sourcing and intermediary distribution.
